

## Type Q

About 1977 a new series of labels was released.  
Size :  $\pm$  47-48 x 19 mm and all printed in red.

After studying that type we found 3 maintypes:

- Without office name.
- Handwritten office name.
- Stamped office name.

The position of the ' R ' in the leftsquare changes in many directions.

The distance between - last numeral- and -right frameline- is always the same. (  $\pm$  10 mm )

The numerals figures of the label ( 1 - 99999 ) are in the same type, but in front of these numerals you find one of the next indications :

- No ( ' N ' seriffed ) ( type Q )
- No ( ' N ' curly ) ( type Q )
- A ( type QA )
- B ( type QB )
- C ( type QC )
- D ( type QD ) Philatelic Bureau
- E ( type QE )
- F ( type QF )

## Type R-5

This type was released in 1975.

Size : ± 38.5 x 14 mm and all printed in red.

After studying that that type we found the next 4 groups :

- Printed office name. ( type R-5 ) numerals 1 - 9999 ?
- Without office name. ( type RR-5 ) numerals 1 - 99999
- Handwritten office name. ( type RR-5 )
- Stamped office name. ( type RR-5 )

Before the numerals we found two indications :

- No ( ' N 'seriffed )
- No ( ' N 'curley )

## Type S-5

This type was released in 1976.

Size : ± 38.5 x 14 mm and all printed in red.

The difference between type R-5 and S-5 :

Type R-5 have thin frame lines and a thin office name.

Type S-5 have thick frame lines and a thick office name.

After studying this type we found the next 4 groups :

- Printed office name ( type S-5 ) numerals 1 - 15000 ?
- Without office name ( type RS-5 ) numerals 1 - 99999
- Handwritten office name ( type RS-5 )
- Stamped office name ( type RS-5 )

Before the numerals we found two indications :

- No ( ' N ' seriffed )
- No ( ' N ' curley )

We also found labels with a crossed out printed name with an other handwritten name.

## Type S-6

About 1979 we found a new label ' S-5 ' with other numerals. The numerals are unseriffed and the ' R ' has a modern stiff character.

The ' R ' of type S-6 is somewhat thicker than type S-5. Size : ± 39 x 14 mm and all printed in red.

After studying that type we found just one group :  
- Printed office name. ( type S-6 ) numerals 1 ? - 9999

It looks like there is a type with a handwritten office name ( Kerowagi ) but the name was crossed out and the new name was handwritten.

## Type T and Ta

About 1981 again a new type of label is used.  
The big difference with earlier types is the small ' R '.  
Size : ± 37 or 38 x 13.5 mm and all printed in red.

After studying that type we found the next 4 groups :

- Printed office name. ( type T ) numerals 001 ? - 99999
- Without office name. ( type RT ) numerals 001 ? and 00001 ?  
- 249999 ?
- Handwritten office name. ( type RT )
- Stamped office name. ( type RT )

Two types of labels were found with a printed name.  
About 1986 we found a label with a new modern character type.  
We called that type Ta.

The position of the ' R ' often changes in type T, Ta and RT.  
Sometimes higher or lower, also the ' R ' is sometimes thicker  
or thinner.

At type T we also found labels with a crossed out printed name  
with an other handwritten name.
